

MISSISSIPPI NATURAL HERITAGE PROGRAM

SPECIAL ANIMALS - TRACKING LIST

- 2002 -

Approximately 1500 species of animals, including representatives of the groups gastropoda, bivalvia (mussels), malacostraca (amphipods, crawfish, shrimp, isopods), insects, cephalaspidomorphi (lamprey), osteichthyes (fishes), amphibians, reptiles, birds, and mammals, are tracked by the Mississippi Natural Heritage Program. Many of these are quite common. Some, however, are known or suspected to occur in low numbers; these are designated as species of special concern, and are listed on the following pages. There are 336 special concern animals, which include 25 gastropods, 51 bivalves, 38 crawfish and shrimp, 28 insects, 1 lamprey, 74 fish, 18 amphibians, 37 reptiles, 49 birds, and 15 mammals. An additional 22 species are designated "watch" status (see "Special Animals – Watching List") with the potential of becoming species of special concern.

This list is designed for the primary purposes of: 1) in environmental assessments, "flagging" of sensitive species that may be negatively affected by proposed actions; 2) determination of protection priorities of natural areas that contain such species; and 3) determination of priorities of inventory and protection for these animals, including the proposed listing of species for federal protection.
